

The Seavision DV80 is a versatile work / temporary light that is attached to any flat surface using a suction cup. The flood effect produced illuminates large areas and is great for lighting any interior or exterior areas where a temporary light source is required. The DV80 is ideal when working in areas lacking light or where regular light sources have failed or been turned off. This rechargeable light has multiple uses and should always be kept handy for daily or temporary use. This light also provides supplemental lighting to notoriously difficult areas to illuminate like boarding platforms. Attaching the light to the yacht or tender greatly improves the safety of anybody boarding the yacht. When not in use the light is easily stored and recharged.
